# INSTALLATION

- 1 Start by sliding 2 t-nuts into each channel in the top of the cross bars that will be used for the installation. Then, place the accessory mount where you would like it and move the t-nuts so that they are under the slots in the panel. Finally, bolt it into place.

The accessory mount is made to be able to bolt on in many different positions. Depending on what gear you plan to mount on it, you may need to rotate the panel or even slide the crossbars forward or backward in their slots.

# TRACTION BOARD MOUNTING

To mount a traction board, you need a TRACBO-BP and 2 accessory mounts. Bolt the traction board to the accessory mount through any of the 3 large slots on each side. Do this using the carriage bolts on the bottom of the accessory mounts, and the spacers and wing nuts on top of the traction board. It may be easiest to loosely bolt the traction boards to the accessory mounts and then line them up with the rack to space them correctly.

# ROTOPAX MOUNTING

To mount a Rotopax, you will need a Rotopax mount that has a detachable mounting plate, or no mounting plate at all. Then, you simply use the hardware that comes with the mount to bolt it into 2 of the slots that make the cross in the middle of the accessory mount.
